

NOTICE OF DIPLOMA WITHHOLDING

Issued under the authority of the Graduate Examination Board · Spring, Yr. 10

CANDIDATE Vitharen Undral		CANDIDATE NUMBER VU·4·00705	
PROGRAMME OF STUDY Physics — Aetherical Mechanics		MINOR Political Theory	YEAR OF STUDY Fourth (Senior)
ACADEMIC DISTINCTION First Class Honours Candidate · Vaelthir Founding Scholar			
THESIS TITLE <i>On the Thermodynamic Inconsistencies of Aetheric Field Stability in the Vaelthir Basin</i>			

COMMITTEE DETERMINATION
NOT APPROVED — THESIS REJECTED Candidate may not proceed to graduation at this time.

COMMITTEE OPINION
The committee has reviewed the thesis submission of Mr. Vitharen Undral in full and convened on two separate occasions to deliberate its findings. The determination to reject the thesis was not reached without careful consideration, and the committee wishes to make clear that this decision reflects no deficiency in the candidate's technical abilities or scholarly rigour. Mr. Undral's treatment of aetheric field measurement is, by any reasonable standard, exemplary. His data collection methodology is thorough, his mathematical framework is correctly applied, and his documentation of energy variance — or rather, the absence thereof — is presented with admirable precision. The committee does not dispute the data. What the committee cannot endorse is the conclusion Mr. Undral draws from that data: namely, that the stability and consistency of the Vaelthir aetheric fields constitutes evidence of deliberate external supplementation — and by implication, that the Silence itself is not a naturally occurring phenomenon but one that is being actively and intentionally maintained. This is a claim of extraordinary magnitude, and the committee holds that the burden of proof required for so serious an assertion has not been met. The committee acknowledges that Mr. Undral has identified a genuine anomaly. The energy calculations are not in dispute. It is the interpretive leap from anomaly to conspiracy that this committee finds itself unable to ratify. Alternative explanations for the observed field consistency have not been sufficiently explored, and until they are, the committee must exercise the caution that its institutional responsibility demands. Mr. Undral is invited to revise and resubmit, provided he is willing to align his conclusions with those supportable within currently accepted theoretical frameworks. The committee remains available for consultation, should the candidate wish to pursue a more measured interpretive framework.

Katie Borgemeier Prof. of Mechanical Engineering Chair, Graduate Examination Board REJECT	Godfrey Ashmere Professor of Astrophysics REJECT	Stilver Lugrathe Gov. Liaison, Office of Resource and Civil Management REJECT	Aldric Fenmore Assoc. Professor, Aetherical Mechanics REJECT *
